Disclosures

- Dr. Johnson has received personal compensation for serving as a consultant for Arthex Biotech, Avidity Biosciences, Dyne Therapeutics, Juvena Therapeutics, Kate Therapeutics, Pepgen, Rgenta Therapeutics, Sarepta Therapeutics, Takeda Pharmaceuticals, and Vertex Pharmaceuticals
- He has received personal compensation for serving on data safety monitoring board for Biogen
- He has stock or an ownership in Juvena Therapeutics
- He has received research support paid to his institution from AMO Pharma, AveXis, Dyne Therapeutics, Fulcrum Therapeutics, ML Bio, Novartis, Pepgen, Sarepta Therapeutics, Sanofi, Takeda Pharmaceuticals, and Vertex Pharmaceuticals

VCU

Evolution of AOC 1001: *Delpacibart Etedesiran* (*Del-desiran*)

- The main components of del-desiran are:
  - **Antibody:** human TfR1-targeting, effector function-null, humanized IgG1 antibody (TfR1 mAb)
  - **Non-cleavable linker**
  - **Oligonucleotide:** double-stranded siRNA oligonucleotide (siDMPK.19) that is complementary to a sequence in the 3' untranslated region (exon 15) of both wild-type and mutant-human DMPK mRNA
- The TfR1 mAb targets muscles for delivery of siDMPK.19 into the cytoplasm and nucleus where it mediates DMPK mRNA degradation

MBNL sequestered by CUG repeats of mutant DMPK

Del-desiran treatment reduced mutant DMPK

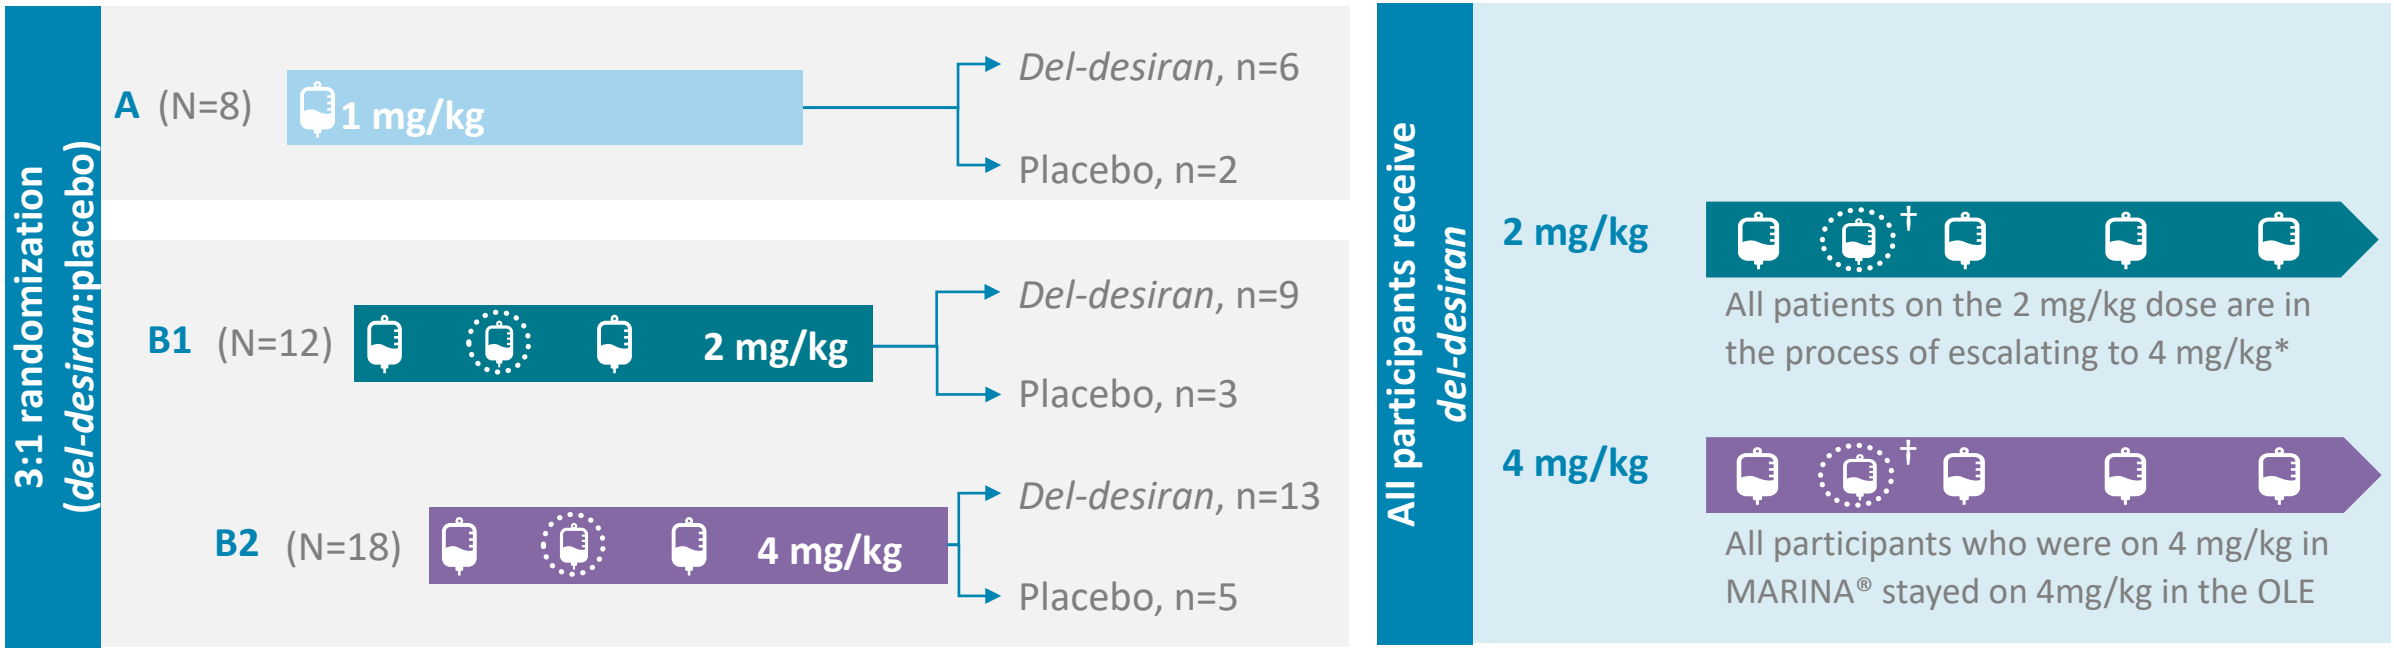
**Del-desiran* leads to dose-dependent increase in functional MBNL[#]

*P<0.05, unpaired t-test

[#]Data shown as mean and standard error. Fold change is calculated per subject as post-treatment relative to baseline;

Wagner, SD, et al. *PLOS Genet.* 2016;12(9):e1006316

MARINA® and MARINA-OLE™ Trials Designed to Evaluate Safety and Tolerability of *Del-desiran*



*Under the terms of the partial clinical hold, the first dose of *del-desiran* must be less than or equal to 2 mg/kg.
†Booster dose was only given to participants who were in Cohort A1 and placebo B1/B2.
Dose listed is siRNA.

- All participants that completed MARINA® enrolled in the MARINA-OLE™
- All participants remain in the MARINA-OLE™

VCU

Del-desiran Demonstrates Favorable Long-Term Safety and Tolerability

As of January 2024, over 265 infusions of *del-desiran* have totaled 61.1 patient-years of exposure

	MARINA®				MARINA-OLE™
Subjects with ≥1 AE, n (%)	Placebo (N=10)	1 mg/kg (N=6)	2 mg/kg (N=9)	4 mg/kg (N=13)	All (N=37)
Any AE	8 (80%)	6 (100%)	9 (100%)	13 (100%)	35 (95%)
AE related to study drug	2 (20%)	1 (17%)	3 (33%)	10 (77%)	9 (24%)
Any Serious AE (SAE)	0	0	1 (11%)	1 (8%)	4 (11%)
SAE related to study drug	0	0	0	1 (8%)	0
AE leading to study discontinuation	0	0	0	1 (8%)	0
AE leading to death	0	0	0	0	0

Safety/Tolerability in MARINA-OLE

- **All 37 participants enrolled remain on study**
- **All related AEs were mild or moderate**
  - Most common related AEs reported in 2 or more participants include:
    - Nausea
    - Headache
  - No discontinuations
  - No related SAEs; unrelated SAEs are consistent with DM1*

*SAEs considered unrelated to treatment included nausea/vomiting, worsening of atrial fibrillation, and chest pain. One participant had acute cholelithiasis and biliary pancreatitis.

END-DM1 Natural History Study: Understanding DM1 Disease Progression

- Non-interventional natural history study aimed to advance the understanding of disease progression in DM1 patients
- Focuses on clinical outcome assessments to support development of therapies for DM1
- 700 patient, 2-year study, ~20 centers
- Designed and run by the Myotonic Dystrophy Clinical Research Network (DMCRN)
- Supported by FDA, MDA, MDF; Avidity is one of several sponsoring organizations

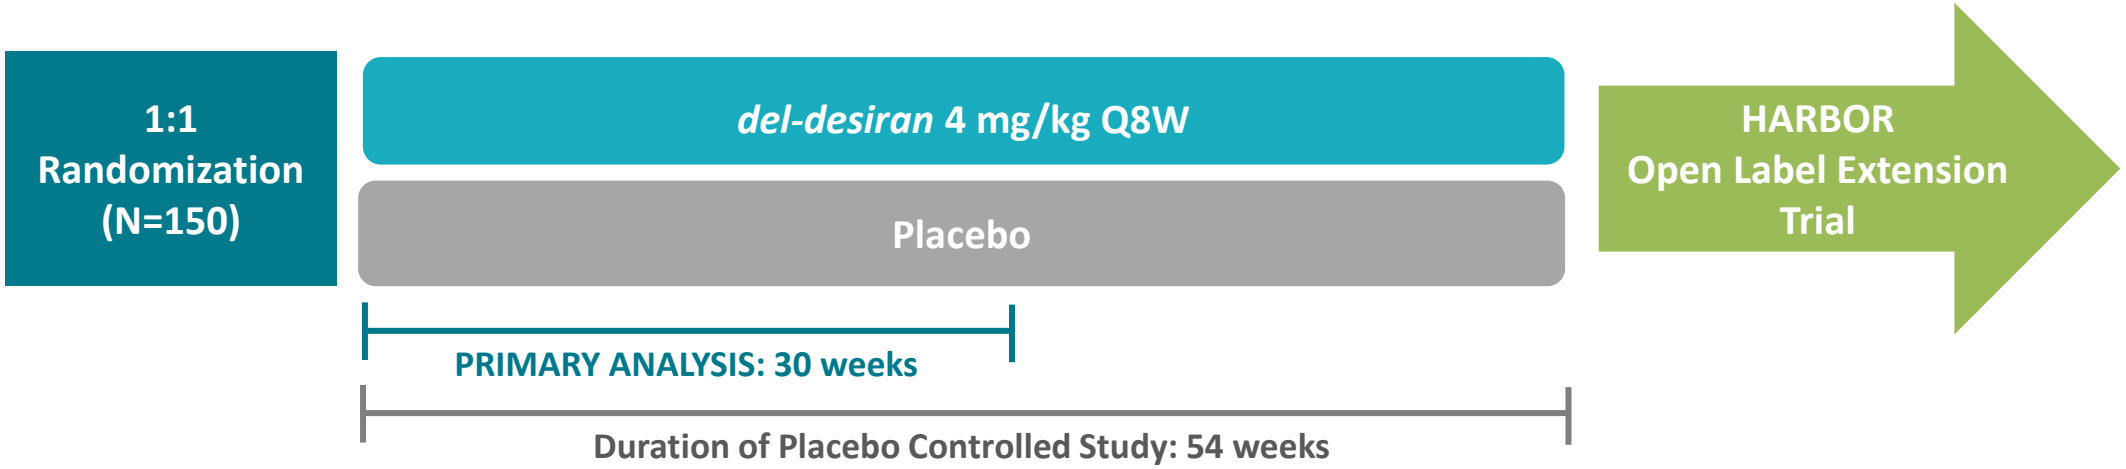
*Day 360 excludes one participant who experienced an injury impairing their ability to perform mobility measures.
CNTL, centile metric score; SEM, standard error of the mean

HARBOR™ Initiating Global Phase 3 Pivotal Trial

- Regulatory agreement on study design
- HARBOR™ study designed for efficiency and speed of execution
- On track to initiate in Q2 2024



HARBOR™ Phase 3 Trial: Design and Objectives

Pivotal Study Design

- 4 mg/kg every 8 weeks; first dose of 2 mg/kg
- N=150; Ages 16+
- 1:1 randomization
- Primary analysis at Week 30; Placebo-control out to week 54
- Participants eligible to roll-over into an open label extension
- ~40 global sites

MARINA-OLE™ Long-Term Data Demonstrate the Potential of *Del-desiran* to be a Transformation Therapy for DM1 Patients

Del-desiran 4 mg/kg

- Demonstrated favorable long-term safety and tolerability
- Showed reversal of disease progression in MARINA® and MARINA-OLE™ compared to END-DM1 natural history data
- Provided consistent and durable improvements in multiple clinical endpoints

Global HARBOR™ trial initiation Q2 2024

Avidity would like to acknowledge the patients, families, investigators and study staff involved in the MARINA® and MARINA-OLE™ trials.

Thanks to END-DM1 investigators for supplying natural history data for this analysis.

Thanks to Yan Moore, Vicky Yu, and Deepika Jethwani for their efforts in the integrated analysis of the MARINA-OLE™ data.
